

## ***Kedou's Safari Tales***

Nature can also be part of our city life. **Kedou** takes you to the Safari Park to discover the family relationships in people and animals.

Go on, take the path that brings you close to the animals. **Elephant, Lion, Rhinoceros, Zebra** and **Giraffe** are some of the usual big animals found in the African savannah habitat. What do you think they eat? **Giraffe** is so tall, how will it ever bend down to drink? Pretend to be **Giraffe** and see what answer you come up with.

**Elephant and Rhinoceros** are often hunted by **People** for their tusk and horn. **Elephant's** tusks are used for decoration and carvings while **Rhinoceros'** horn is also used for folk medicine. How do you think we can protect **Elephant, Rhinoceros** and their families?

**Lions** live in prides with usually one **Lion** and many **Lionesses** with their cubs. **Lions** guard the pride's territory. **Lionesses** co-operate to hunt big prey like **Zebras**.

Look at **Zebra** and **Lemur** and their bold black and white stripes. Can you guess why they have them? **Lemurs** don't live in the African savannah but on an African island called Madagascar. They are actually our distant relatives. They are primates, just like **People**. **Lemurs** can stand on their hind legs and use their hands to pluck leaves. They hold their tails up in the air as a signal to the whole family to stay together.

Try your hand at matching the animals and their families. What about us too?

Have fun with Kedou at the Safari Park but remember, our animal friends don't like to be teased and hurt, just like us. So take all the photographs you want, enjoy your ice-cream but there's no need to feed the animals.
